

Prefazione agli *Occasional Papers del CeSLiC*

Quaderni del CeSLiC

General Editor – Donna R. Miller

Occasional Papers – Comitato Scientifico:

Susanna Bonaldi, LouAnn Haarman, Donna R. Miller, Paola Nobile, Eva-Maria Thüne

Sono lietissima di presentare il secondo saggio della serie di *Occasional Papers*, collocati all'interno dei *Quaderni del Centro di Studi Linguistico-Culturali (CeSLiC)*, un centro di ricerca del quale sono responsabile e che opera nell'ambito del Dipartimento di Lingue e Letterature Straniere e Moderne dell'Alma Mater Studiorum – Università di Bologna.

Il primo articolo è stato quello di Sabrina Fusari, dal titolo:

Il direct mail per le organizzazioni nonprofit: analisi retorica interculturale italiano-inglese –

disponibile in: http://amsacta.cib.unibo.it/archive/00000953/01/CESLIC_OP1.pdf

Gli *Occasional Papers* vanno ad aggiungersi:

1) alla serie di manuali degli *Quaderni del CeSLiC: Functional Grammar Studies for Non-Native Speakers of English*, che già vanta tre volumi pubblicati:

- M. Freddi, *Functional Grammar: An Introduction for the EFL Student* <http://amsacta.cib.unibo.it/archive/00000867/>
- M. Lipson, *Exploring Functional Grammar* <http://amsacta.cib.unibo.it/archive/00000871/>
- D.R. Miller (with the collaboration of A. Maiorani and M. Turci), *Language as Purposeful: Functional Varieties of Texts* <http://amsacta.cib.unibo.it/archive/00000866/>

Vi è inoltre un quarto volume di questi studi in preparazione che verte sulla traduzione in una prospettiva sistemica.

2) agli Atti dei Convegni patrocinati dal centro. Sono, infatti, di prossima pubblicazione, sia on line sia in forma cartacea, una selezione dei *papers* presentati alle nostre Giornate di Studio del 17 – 18 giugno 2005: “Insegnare le lingue/culture oggi: Il contributo dell'interdisciplinarietà”.

Mi rallegro ora di poter offrire un contributo di notevole interesse scientifico: il saggio di Bill Louw, studioso di fama internazionale nel campo della linguistica dei corpora. Il titolo del lavoro è:

DRESSING UP WAIVER : A STOCHASTIC COLLOCATIONAL READING OF ‘THE TRUTH AND RECONCILIATION COMMISSION’ (TRC)

Si tratta di una sostanziosa monografia che è stata scritta per John Sinclair, l'ideatore per eccellenza di ciò che Louw chiama la moderna strumentazione ‘digitale’ per gli studi linguistici, in occasione del suo settantesimo compleanno, l'anno in cui il Sud Africa si accingeva a celebrare il decimo anniversario della sua indipendenza. Una parte di questo *paper* è stato anche presentato nell'ambito di un seminario tenutosi all'Università di Birmingham il 16 dicembre, 2003.

Il lavoro è anche briosamente provocatorio: Louw crede fermamente nel potere rilevatore dei *concordances*, e soprattutto in quello delle *collocazioni*. Sebbene non si è sempre d'accordo con tutto ciò che sostiene, si è sempre consapevole di essere in presenza di un uomo di pensiero acuto e stimolante. Ai nostri lettori diamo, dunque, l'opportunità di fruirne.

Donna R. Miller

DRESSING UP WAIVER : A STOCHASTIC COLLOCATIONAL READING OF 'THE TRUTH AND RECONCILIATION COMMISSION (TRC)'

Bill Louw

(Senior Lecturer in Modern English Language
University of Zimbabwe)

ABSTRACT

Large language corpora such as the Bank of English (BOE) demonstrably render redundant the objectives of Markov's (1913) theory of stochastic processes and chains. However, there is growing evidence that this theory may now be recast successfully as the procedural basis for data-driven, forensic reading. The procedure involves the extraction from a large natural language corpus of collocation profiles for each successive chained two word sequence as these appear in an authentic piece of written text, or target text under investigation (see title above). The procedure works best where the text is presented as a chained event, whose steps are purportedly determined by logical implicature. These successive collocational profiles will, between them, create a form of 'narrative' in terms of which the 'chained events' in the target text will either be perceived to march in step (stochastic concomitance) with the same repeatable events recoverable in the Bank of English at each successive point of choice, or they will, instead, present a mismatch in relation to the outcomes 'expected' by the corpus, but often blind to human intuition (stochastic dissonance). Stochastic dissonance results when the author(s) of the target text knowingly insert a tendentious, spurious and illegitimate event-component, in place of a legitimate one. Where this occurs, the interloper event-component will be unsupported by the consensus of virtual authorial expectation within the corpus as a whole. Fraudulent events are only fully detectable by means of a stochastic collocational (SC) reading. Such mismatches reveal events which have been thwarted for some discernible *motive*, such as the creation of an ideology (manufactured consent). This is especially the case where the SC reading reveals suasive-evaluative phenomena such as concealed semantic prosodies and/or the deliberate and planned 'padding', of the corpus with fake collocates. Such padding is accomplished by stealth through excessive press publicity of a spurious phenomenon, with the intention of creating for it the status of a fixed expression, and in the knowledge, also, that advanced corpora are created by means of the daily automatic capture of entire newspapers as part of corpus development. The detection of such collocative fraud ought, in future, to form part of the on-line task of monitor corpora. The concerns expressed in this monograph are intended to improve the justice delivery system internationally by encouraging the development of 'endogenous' forensic linguistics, i.e. forensic linguistics directed against the legal profession and even the courts themselves. Such research ought also to foster the launching of class actions where these are appropriate in order to rectify the damage caused to large numbers of citizens through the actions of fake institutions 'invented' by the First World for the Third World to 'live' out.

If they could be cruel enough to cow the natives down with brutal force and install themselves as perpetual rulers in a foreign land, then anything else they do to the same black people becomes *logical* in terms of the initial cruelty. To expect justice from them at any stage is to be naive." (Emphasis added) Steve Biko (1946-77) (*I Write What I Like*, 1978, Oxford: Heinemann)

1. **INTRODUCTION**

Almost fifty years ago, Colin Cherry, commenting upon the painstaking work of A.A. Markov (1913), who had established the theory of stochastic processes, wrote the following:

...The limitation is not the mere labour of letter counting; it is the fact that *there are not enough books*. The data gathered would not be statistical; they would be Shakespeare's actual lines and verses, for each sequence would occur only once... (emphasis added) (Cherry, 1957:39)

These lines sound altogether less desperate as they are read with the benefit of hindsight in 2003. Cherry's remarks are of greater interest to scholars since the advent of corpus linguistics and its advancement on a scale which could not have been predicted in 1957. Cherry's words are also indicative of a number of problems in corpus linguistics (to be addressed in this paper), which remain largely unsolved even today, when the Bank of English (BOE), probably the largest natural language corpus in the world, has reached a total of almost half a billion words of running text. Today, Cherry's complaint that 'there are not enough books' is easily silenced. The BOE would be the equivalent in 'book' terms of around 7,000 volumes and the 'labour of letter counting' is effortlessly assumed by modern computers. However, the fact that, in the fifties, Cherry and others were still looking to possess all of Shakespeare's works in a machine-readable form, is worthy of comment as it bears upon computational linguistics today.

A problem has arisen out of the growing distinction between professional and lay understandings of the nature of a corpus. Those, and there are many, who wish to obfuscate the true value and power of corpora, would like everyone to believe that the ability to hold all of an author's work in a machine-readable form, somehow constitutes a 'corpus'. This is untrue. If anything, such collections are little more than electronic filing cabinets. The same argument applies to corpora which individuals announce, all too frequently at conferences, to be corpora which they have 'created' or made. Again, such collections are no more than filing cabinets, which carry with them the comfort for their owners of knowing that no *surprises* are likely to be found in them. They are what might be called 'minnows in - minnows out' filing cabinets, masquerading as corpora in order to sound fashionable and state of

the art, whilst simultaneously silencing demands for a genuine corpus. Both Cherry and Markov before him yearned for something better: a language corpus so large that the statistical findings concerning stochastic processes would surprise the investigator rather than merely constitute the collected texts of a single author.

In other words, a corpus, in the true sense of the term, would act both *unpredictably*, and as a *rival* to human intuition. It would be like possessing an extra *mind*: one which can not only see things that our own minds have missed, but also be capable of revealing linguistic phenomena which have long been latent in our intuitive *blind-spots* and in those of all human beings throughout recorded history. Such material may well have escaped the conscious ratiocinative processes of human beings for hundreds or even thousands of years. By contrast with 'minnows-in, minnows-out corpora', the use of a large corpus to assist us in augmenting the traditional act of reading a text, would be a powerful and unpredictable tool. It is this *heuristic* property of such corpora to which I shall be referring in the course of this paper.

1.1 Instrumentation

Up to the present day in linguistic inquiry, we have been taught to rely upon our intuition in order to discover meaning. As a result of research into corpora, we now find that our intuition has missed a great deal of insight into language over a long period of time, even though we have developed a large body of rudimentary analytical tools at all 'levels of language'. The tools we have developed are often themselves products of our intuition: their status, before 1985 (see below), is effectively that of *analogue* instrumentation for the study and analysis of language. In fact, there is a sense in which all analysis produced in the history of linguistics up to the advent of large language corpora falls into this category. The continuing work, some of it talented and well meaning, in support of intuitively derived language theories (such as Systemic Functional Linguistics) also falls into the category of analogue instrumentation. It does so for the reason that it is demonstrably hobbled and will finally be end-stopped because of inevitable failures of human intuition, upon which its theory rests. This is especially the case where its proponents purport to treat delexical (especially phraseological) forms in the same way as they would fully lexicalised forms. A brief example may suffice to demonstrate this.

It is common cause that during meetings and negotiations the parties involved are not only apt to, but expected to attempt to deceive one another, as part of what might be termed the ideology of the boardroom. A common method of such deception is the concealment of facts or even the fraudulent non-disclosure of them. Yet, when such deception is detected, it is very rare for the meeting in which such revelations occur to dissolve in uproar because of perceived dishonesty. A form of ideology is used to mask the disagreement. At the level of exponency it may take the following form: the party that has been caught withholding information, immediately declares

him/herself to be **happy to** provide, table, or enter the missing material into evidence, as the following excerpts of a concordance from the Sizewell Corpus prove. Notice that the form is not simply *happy*, but is phraseological and delexical in ways which force the expansion of the meaning of that term.

However, instrumentation which is capable of showing up flaws in our intuition about language has become available only fairly recently and is, even now, frankly unwelcome within the domain of many traditional forms of inquiry, especially those (like linguistics, literary criticism or law) with long traditions and entrenched ideologies. This latter *digital* instrumentation was effectively brought about by John Sinclair in 1985, with the provision, on microfiche, of full concordances for the use of lexicographers at COBUILD. This led to the publication of the first computer-concordanced dictionary, using a corpus of around 21 million running words: The Cobuild English Language Dictionary, published by William Collins and Sons of Glasgow. Sinclair continued to produce many improvements of the technology and these were used in the production of the second edition of the dictionary, especially in the area of collocation. Further refinements continue to surface as his research advances. Sinclair

(personal communication) is currently in the process of writing up, in greater detail than was possible at the time, his earliest research in lexical computing, dating from the sixties.

However, the developments which enabled the production of the Cobuild dictionary are never referred to by investigators and linguists in the manner in which I am proposing: as *digital* instrumentation for language. There are two main reasons for this. Firstly, the advent of this final stage of instrumentation for language has been difficult to *recognise*, mainly because very few of us, Markov and de Saussure, aside, saw or appreciated that our activities as linguists were working towards the provision of instrumentation for language. Analogue instrumentation had always been a product of *description* at a particular level of language. However, the act of description, over many generations, had begun to worship itself and in doing so lost sight of its own objectives. The fact that this is a fairly common phenomenon in the history of instrumentation ought to hearten rather than discourage us. Secondly, the provision of digital instrumentation for language was so momentous that modesty has, I believe, prevented Sinclair from claiming the credit for this huge contribution and milestone in the history of language study. Most linguists did not see the advent of digital instrumentation in their discipline, because, quite simply, they were neither expecting it nor looking for it. They were not looking for it, because they had never seen anything like it in their entire lifetime. They did not recognise it because they had been actively misled into the belief that linguistics was a 'soft' science which must derive its theoretical basis by means of the process of reductionism (see below). Sinclair has, I believe, realised the nature and extent of his contribution, but may find himself unable say so, without feeling or appearing vainglorious. However, *someone* has to state this contribution. The record must be set straight for our generation and for those which follow and continue to study traditional linguistics without realising that it has died and been replaced by a 'hard' science.

Sinclair must have hoped that linguists would spot the full significance of his achievement. They have not done so; not so much for reasons of spite or envy (although these, undeniably, are factors), but because linguistic science is arguably the very *last* science to gain full instrumentation. The advent of instrumentation for other sciences is now more than several generations in the past and the features which characterised its arrival would, today, be difficult to notice. Proof of this fact is that most academics *still* have not noticed what is going on. They are caught in a bizarre time warp, where corpus markup and annotation are considered fashionable and sophisticated (like a wrist watch which shows the time both digitally and analogically) rather than obfuscatory or, as they increasingly are, entirely surplus to requirements.

The worst and most telling example of this trend is the general, but entirely erroneous and misguided feeling that corpus linguists must somehow impose their analogue labels upon the digital corpus in the form of markup language! In a recent unpublished paper aimed at beginners and policy

makers, Sinclair is modestly generous on this subject, but most of us know at once that the continued excessive use of markup language in corpora is foolish. Without markup language the high degree of instrumentation Sinclair has produced would not have been possible; but, now that we have digital instrumentation, excessive annotation would be like leaving the scaffolding in place, long after the building has been erected and its construction brought to finality. The present situation would be akin to the desire of some putative scientist to superimpose analogue thermometers on top of their digital versions and to persist (for reasons of fake theory) in doing so!

However, if we smother a corpus in markup language, we may never need to acknowledge its power or the **fact** that description may now, legitimately, quietly, cease. Sinclair (personal communication) often refers refers to a particular academic as a man who 'speaks fluent SGML' (Standard General Markup Language). However, the time is now upon us to pull ourselves together and ask ourselves: 'Which linguist dares confess that his or her arcane, trip and conference-generating discipline has finally reached its goal, by having developed digital instrumentation for the discovery of *meaning*. Linguists fight shy of questions that are likely to show that their discipline has degenerated unnoticed into the much feared and censored act of *critical reading* (now data-assisted or even partially data-driven)! An ability to go *directly to meaning* is, to say the least, ideologically inconvenient, especially for ancient institutions, such as the law, which are often corrupt and powerful in ways which command an unquestioned and hence untrammelled ideological status. The example of 'natural justice' which follows in the next section will illustrate this.

2. ***Collocational Meaning***

There is a growing body of evidence to prove that individual words do not carry meaning in sacks tied to their backs. Michel Breal (1897) was the first academic to suggest that meaning is imparted to words and expressions through their habitual *proximity* to one another. This idea was to lie fallow for almost fifty years. It was revived by J.R. Firth, who not only stated that 'You shall know a word by the company it keeps' (1968:106), but sought to place the phenomenon of collocation completely above the mundane linguistic practice of segmentation. He achieved this by means of an apparent subterfuge. Firth created the term *colligation* in order to refer a syntagmatic relationship involving mutual expectancy among elements of grammatical structure; but, having done so, he proceeded to *ignore* this new classification altogether and concentrated his considerable intellectual powers instead upon the term's counterpart, *collocation*.

Unlike colligations, collocations obtain between words as such, not between categories (1968:181). Firth was probably the first linguist to entertain the possibility of proceeding directly to meaning without 'segmental analysis of the phonemic type'. Ironically, the much vaunted suggestion by commentators that colligation is a sleeping giant in linguistics, has now been overtaken and neutralised by corpus-based instrumentation. Today,

colligation has little more than the status of a 'subject offering' in the history of linguistics. A greater irony is that linguistics itself, since the advent of instrumentation for language, has degenerated into a more or less historical discipline, without the knowledge or understanding of most of its current proponents. Firth's view that '*notional*' criteria would have no role to play in the goals of linguistic inquiry has proved absolutely accurate: he was prepared to allow its use to label larger aspects of context of situation only. If Cobuild were ever to proceed to a third edition of the dictionary, such a dictionary would, to some extent, and fairly inevitably, need to be a dictionary of events. Mentalism may have a small role to play in providing names for event-types, although many of these would become casualties of corpus evidence or the lack of it.

Collocation, by contrast, has become the new heuristic domain of language study and is likely to dominate linguistic science well into the new millennium. The best indication of the threat which it poses to established thinking is to be found in the **extent** to which it has been and is still, deliberately ignored by theoreticians whose intuitively derived theories collocation is likely to unravel. Even Michael Halliday dismisses collocation within a page or two in both editions of his major work on functional grammar. He is, apparently, not prepared to allow corpus evidence to dismantle the impressive edifice of triune theoretical constructs provided by his own able, but, nonetheless, human, and therefore flawed, intuition.

2.1 *Collocation and Stochastic Processes*

The decision, in the present study, to use stochastic processes as the basis for the selection of collocational profiles will need to be defended. If collocation allows the investigator to proceed directly to meaning, why is it necessary or desirable to create a linear and textual process for the successive selection from the corpus of collocation profiles? Is there not a contradiction in arguing for the independent action of collocation and then proceeding to force the process of accessing collocates to follow what looks like a form of grammatically structured linearity? There are several reasons for proceeding in the manner proposed in this paper:-

1. The approach is **not** structural, but probabilistic in ways which go beyond what Firth refers to as the 'mutual expectancy of words' (1968:106). There can be a mutual expectancy of words within a fixed expression; but, what if the fixed expression is itself a fraudulently motivated creation? Collocation alone cannot handle the unravelling of what is presented stochastically as a series of event components leading to an outcome, especially a *fake* outcome. However, a re-invented, computational Markov process can assist us. Firth's taxonomy for context of situation points us towards an expectancy of outcomes which is socially attestable and this will form the basis for further analysis of the target text (see the title of this monograph) later in this paper.

2. Text is ephemeral to the point that the **minimal** segments which construct its linearity may, considering the demonstrably degraded nature of human intuition, be our only guide for determining the points at which *transitions* towards or away from expected outcomes (concomitance or dissonance) could occur. The process is purely procedural and the term 'segments' has the purely computational status of 'adjacent strings separated by a space'. The grammatical considerations which give rise to successive collocational profiles are of no concern to the investigator, now that digital instrumentation has been fully refined. Although tagging, parsing and other forms of corpus annotation were crucial to the process of providing instrumentation, they are surplus to requirements if our goal today is to proceed directly to meaning. All modern grammarians are now, although they may not yet know it, well on their way to becoming data-assisted critical readers. Hence, the 'narratives' thrown up by these collocational profiles are the investigators' main concern. They are assembled and articulated in terms of and by means of their *frequency* (in the corpus) alone. It is only fair that frequency be allowed to determine the true, rather than notional, nature and, hence, the normality of particular repeatable events. The collocational profiles being sought in the process of the reading which is proposed have been termed 'narratives' for at least three reasons: because (1) linguistics, post-instrumentation, is more akin to a form of reading than a form of description; (2) the approach bears out the Malinowskian view of language as a 'mode of action', in which *narrative* provided an effective means of translating events in the life of Trobriand islanders; and (3) the approach reflects Firth's adoption of this view and his own personification of collocation as companionship, or 'keeping company'. It is this latter property which has prompted my use of the term 'concomitance' in chained events. Collocates that, like their human counterparts, behave abnormally, usually have a motive. They will have been suborned.

The most frequent collocates, which appear as a particular chained event progresses, must be considered to provide the most frequent narratives for repeatable events. These will be 'true to life' (see Louw, 2000). Where there is legitimacy at the level of the event's *outcome*, these narratives will be seen to subsume and inter-penetrate one another quite comfortably. For example, the narratives which appear from the collocates of the minimal stochastic pair, the+truth are, in descending frequency (see Step 1 below) *tell*, and *know*. Apart from the obvious logical implicature present, we feel comfortable that, although the 'persons, personalities' (see Appendix G) involved in these narratives may be different (for telling and knowing), their **pursuit is common**, both within the target text and in the repeatable corpus-based events being used to **read** it. The repeatable event which is prominent in the corpus must be recoverable in the text and, in Firthian-Malinowskian terms, also in *life* (see also references to Contextual Prosodic Theory, in Louw, 2000). This specification will not necessarily apply to all textual study. However, it may be

favoured, where, as in the present case, forensic evidence of deception or 'event fraud' is being sought. The approach does not seek to 'hamstring' collocation in ways that other specifications do (see Kjellmer, 1982). Where forensic readings are not being conducted, Sinclair's own 'chunking' procedure will usually suffice. However, there can be little doubt that the authors of the TRC contrived to have human intuition accept the term TRC in a single chunk, as a self-explanatory learned expression (Sinclair, 1991:124), in the same way that 'hook, line and sinker' is a chunk.

3. The approach identifies the manner in which, and the moment at which, suave stealth, or 'spin', is used to mask the advent of stochastic dissonance. This may be accomplished by means of the timely introduction of suavely and evaluatively stated (see Hunston and Thompson, 2000), but, nonetheless fraudulent, outcomes. A good example would be the use of a positive *semantic prosody* to act in lieu of an expected, but **denied** reward (see Step 3 below).
4. Although Markov's view of stochastic processes pre-dates the Firthian tradition, they are, up to a point, compatible with Firth's 'mutual expectancy of words' and peculiarly well placed to assist in the recovery, computationally, of such expectancy. The term *stokhastikos* in Greek translates approximately as 'capable of being hinted at'. Two-word stochastic processes present the disadvantage to the investigator of replicating much collocational detail, because they are (in our target text) only a quarter the size of the nine word window. However, this is amply compensated for by their lockstep, linear mode of operation and the fact that they 'slow down' the beguiling speed of corpus work. They are akin to the method of finding subliminal features in video-taped advertisements: frame by frame. Where authorial deception is planned, stochastic processes miss nothing. We ought not to eschew the work of Markov simply because it attracted the deep interest and fake disparagement of mentalist linguistics. By rejecting his work, the mentalists, whose goal was to use structure as a form of linguistic 'divide and rule' in the obfuscation of meaning, paid Markov their highest compliment. Collocation and stochastic processes are not hidebound by structure. They operate beyond it and free us from the desire to impose categories. The mentalists also thought that linguistic instrumentation would never have the status of a hard science. They were wrong.
5. Where a target text, such as our target text, 'asks' to be read in a particular order, (one which purports to 'march in step' **logically** and **linearly** with the expected aspects of an event as *these unfold*), the use of stochastic methods in conjunction with collocation is inevitable. In our target text, the inference is inescapable that, in some sense, *reconciliation* is to be viewed as a **consequence** of *truth*, and its disclosure. To reverse these two elements in the title of the Commission would be to destroy its meaning and intention **by making it**

look less like the repeatable event its authors want it appear to mirror: 'due process and the rule of law', as encapsulated in the collocational pair 'truth and justice' (cf. D.R. Miller, 2004). Hence, the method used which combines stochastic processes and collocation is not unlike the difference between cinematic projection and viewing. Stochastic processes operate like the film as it is drawn by its sprocket holes, frame by frame through the gate and shutter of the projector. The extraction of collocation profiles for two word sequences are the counterpart of the viewing on the screen of the consequences for events which are, in Malinowskian and Firthian terms, *in medias res*, as each frame advances. This paper attempts to slow down the beguiling and ephemeral nature of that process and to view it in slow motion.

6. Proof of the fact that stochastic processes and collocation complement one another is to be found in the ability of software programmes, such as the original Cobuild 'lookup', to depart from strictly stochastic procedures. For example, finding the true extent of the prevalence of form *justice* to the right of *truth* is accomplished easily by a request of the type: QUERY: truth+3justice. A similar request for truth+3reconciliation demonstrates conclusively the presence of 'event fraud', as will be shown later. It is worth noting that that an apparently successful attempt was made by a temporary programmer employed at Cobuild in the late nineties to produce a 'new' form of 'lookup' which did **not** have this 'skip search' ability. No attempt was made to persuade me to the contrary when I confronted the programmer and told him that the concept behind the new search facility was retrograde and might falsify the Cobuild legacy. Perhaps the findings of this paper may assist in settling the matter.
7. A further decisive issue is to be found in the fact that even the limited stochastic processes involved in chained events proved too terrifyingly authentic for mentalist researchers and may well have prompted their retreat away from authentic text and into considering grammar-bound, made up, citation form sentences as products of the human mind. The move towards discourse analysis (see Harris, 1952) had to be stopped. The death of Harris assisted this process. As Hans Hormann puts it:

...grammatical structures consist of hierarchical relationships between units of **different** sets, e.g., nominal phrase, substantive, in the accusative, in the plural. In historical retrospect, it is easy to say that a total reduction of grammatical structures to probabilistic ones is doomed to failure. *Nevertheless, this approach has come amazingly far.* (One of the weaknesses of the grammatic-syntactic models, which dominate today, is that they totally ignore probabilistic determinants). (1979:99) (Emphasis added)

Sinclair's (1991) discovery of semantic prosodies and the further work of Louw (1993;1997;2000) and others, have begun to vindicate Breal's (1897) insight that meaning operates as a form of 'contagion' (see also Ullmann, 1962:198). Sinclair's finding that collocational power is concentrated within a nine word window, four words to the left and four words to the right of the node, is arguably the single most exciting discovery to vindicate Breal's contention. The nine word window of collocative power is at the very hub of digital instrumentation for language. It is certainly sufficient, unaided, to destroy current notions of the 'cognitive' and could easily dispose of what is referred to as the 'cognitive turn' in stylistics (see Stockwell, 2002), which purports to treat delexical forms as the (dead) metaphorical basis for the power of poetry.

More recent research by Sinclair (1996) has concentrated on phraseological units larger than the word. The fact that such units exhibit totally descript collocational profiles has paved the way for much of the research involved in this paper. The example of natural justice¹, below, demonstrates this very well. Its collocational profile as a minimal stochastic unit, and its resulting 'narratives' leave us in no doubt that our treatment of the unit has to be expanded both to the **left** and to the **right** of it, as a matter of urgency. The term *natural justice* needs to be investigated as an 'event': a chained event in Markovian terms and as a repeatable event in Firthian terms (see also Crystal, 1985:189;Lepschy, 1982:127). Firth realised that collocational profiles ought not to be dominated by the word. With one eye on their situational meaning, he suggests that they be recovered as they bear upon 'complete sentences' or in conversation, and that they be 'extended to the utterances of preceding and following speakers' (1968:107). This may mean that Firth, in spite of the often ridiculed pre-computational nature of the examples he used, foresaw something of Sinclair's 'nine word window'. His reference to so traditional a boundary as the sentence sounds a little confining, if not dominated by the descriptive tradition, but his entire approach is undeniably situationally contextual and appears to assist the general argument advanced by this paper.

¹This material was first presented as part of a course at the Tuscan Word Centre (TWC) for postgraduate students from EU countries in June 2000. The content of the concordance was inexplicably censored and altered overnight, during preparations for the course at the TWC. This successfully disrupted the use of the example on that occasion and paper copies were issued to delegates at the time, but, unfortunately, with insufficient explanation. Its use here sets the record straight. The fabric of the occurrences of this form, as they appear in the corpus, has apparently been altered in the past three years. The original concordance appears in this paper. 'Homogenisation' of corpora is likely to take place in future (see especially Appendix I). The sanitisation of corpora is an unacceptable infraction of academic freedom.

Firth also probably felt the magnetic pull towards phraseology, even though, as a pre-computational scholar, he could not have appreciated the full extent and consequences of delexicalisation. However, the traditional forces of word and sentence are, between them, still powerful suborners of most linguistic investigative procedure. Even the Cobuild Dictionary of Collocations (1995), coming as it did before Sinclair's more recent research, suffers to some extent in its design, from the single word fallacy and that dictionary's policy on 'stop words' occasionally obfuscates their often huge potential in the area of phraseological and, hence, delexical meaning.

An example will make this clearer. The institution from which it is taken is the law. The term is *natural justice*. Within the legal profession, 'insiders', upon reading or hearing this expression, go through a process of interpretation which is radically different from that which 'outsiders' follow. If you are reading this as an uninitiated outsider, you will probably be reasoning things along these lines as you attempt to determine the expression's meaning²:

All human beings are immediately and intuitively aware of the nature

²For my understanding of waiver and its role in ideology, I am indebted to Lesley Paterson, a Zimbabwean human rights lawyer who, for more than ten years, has been, and still is, unlawfully locked out of legal practice in Zimbabwe, apparently as a result of secret-society concessions in the judiciary of that country, agreed at the Lancaster House Conference on Zimbabwean Independence in 1980. Even the International Bar Association and Commonwealth Lawyers Association apparently continue to connive with this outrageous abuse of human rights. Paterson was instrumental in the removal of Zimbabwe's Chief Justice Anthony Gubbay from office in February 2001 for attempting to murder a Mrs Sukohlhule Kachipare who was then on death row. For the first time in the history of the country, she was released as a consequence of Presidential intervention to prevent the judicial abuse of the death penalty. In his own judgment (Unreported Judgment No SC 139-98 and Reported, but edited, Judgment in 1998 Volume Two Zimbabwe Law Reports at page 271), Gubbay concedes that she ought to have been acquitted at the end of the State's case against her at her High Court trial, but proceeds in the same judgment to uphold the High Court's illegal conviction and death sentence against her thereby condoning its miscarriage of justice! As recently as January 2003, Gubbay's successor, Godfrey Chidyausiku CJ, who has made no move, at the time of writing, to hear Paterson's constitutional appeal to remain a registered legal practitioner, apparently connived with Sternford Moyo, President of the Law Society of Zimbabwe (of which Paterson is a member) to use physical violence to prevent her from attending the opening of the High Court in Harare for the year 2003. As recently as Monday, 8th December 2003, physical violence was again used by Moyo to remove Paterson from the Law Society's AGM, a meeting to which she had always been admitted in the past! Her struggle for justice continues and is worthy of international support.

of injustice and of miscarriages of justice. In this sense, we find that our reaction to injustice is universal and therefore '*natural*', as is our desire to see injustice remedied through court rulings which set in place appropriate, just and fair 'remedies'; or, if need be, 'informal' justice might be a '*natural*' outcome, as some person or group becomes intolerant of the tardiness of due process or vexatious abuse of process and such aggrieved persons might take the law into their own hands...

However, if you are an insider to the legal profession, your reasoning process operates entirely differently. *Natural justice* can only be deemed to have been achieved if two provisions have been met: (1) that an aggrieved party has been given a hearing (this first provision, in Latin, being *Audi alteram partem* or 'hear the other side'); and (2) that this hearing must have been *unbiased*, i.e. it must have been carried out by an impartial and independent authority. Nobody with a material interest in the dispute may be involved in its adjudication (this second provision, in Latin, being *Nemo iudex in sua causa* or 'Nobody can be a judge in his/her own cause'). Where natural justice has been breached, such a breach constitutes a 'fatal flaw' to the proceedings and an unbiased judge will rule accordingly in order to protect the victim's cause of action. In other words, the judge *ought* to rule in his/her favour.

Notice what has happened in the process of interpretation so far. The outsider has proceeded by way of 'word meaning' and produced an erroneous interpretation ('justice is natural'). However, this interpretation is one with which the legal profession and even the judiciary have reason to feel comfortable: the client or litigant does **not** know the term's meaning *at law*. Insiders interpret the form *natural justice* as a technical term and process the phrase as a whole. However, for ideological reasons, they would be reluctant to concede that the term only ever arises when there has been apparent judicial or quasi-judicial misconduct, leading to the breach of a litigant's rights. How convenient: everyone trusts a judge.

Breal would say that the term *natural justice* derives its meaning not from its own component words, but through the 'contagion' brought about because of the proximity of its habitual collocates, such as breached or denied. Of course, during Breal's and even Firth's pre-computational lifetimes, these collocates would have had to be established intuitively. As part of that process one would need to establish how many of the limited number of victims that one happened to know personally were ever successful as litigants. Was the phrase *natural justice* uttered as part of their proceedings? If so, was it upheld or breached? And if so, by whom? We would find this process about as satisfying as Cherry found a 'corpus' of Shakespeare's works. We would gain no probabilistic idea of what precedes the mention of *natural justice* (i.e. in the terminology of corpus studies, to the *left* of the expression) and we would gain insufficient information about whether judges ever rectified breaches brought to their attention (if we studied the event as it expanded to the *right* of the expression). Were the litigants left without a remedy? The answer may well be affirmative. In

fact, the narrative apparently ceases to the right of the expression. There is no continuation of a chained event with the word *and*. Or is that the meaning of the term? That is, does it mean that the judge has joined the conspiracy and that the litigant is effectively destroyed once the term has been uttered? Litigants deserve better than to have their cases settled by the incantatory use of insider phrases.

Even if corpora are finally sanitised and homogenised to prevent instrumentation from making a decision on the fate of victims to the right of the form, the recovery of the grammatical subject of all the passive forms to the left (*denied, breached*) ought to assist us in settling exactly how the event habitually proceeds.

However, there is a fact, which is completely material to the concerns of this paper, and which incriminates the judges further. If the corpus material to the right of natural+justice+and (see Appendix H) were to show us no evidence at all that the form is ever viewed as forming part of a chained event, one might have accepted the possibility that judges never see it as one and that they regard each case of a breach of natural justice differently. They might wish to claim that their response is dictated by the different circumstances of each case. However, there is one entry in the corpus which suggests otherwise: there is one in which the context makes it plain that the breach is only *hypothetical* and has not actually occurred. In this instance, we find that the judge parades before us logically and in a chained event, the full force of the law which the breach ought to attract.

...contracts on a provisional interim basis, and for requiring adjudicators' decisions to be enforced pending the final determination of such disputes. His Lordship noted that it was very easy to challenge a decision based on an alleged breach of natural justice, and an unsuccessful party before the adjudicator would need only to make such a challenge in order to prevent the decision's enforcement. In his Lordship's judgment, if Parliament had intended to qualify the word "decision" in some way then that...

This is very troubling indeed. Judges do know what is expected of them. What may we infer from the absence in authentic rather than hypothetical cases, of both logical implicature and semantic tidiness leading in the direction of a just outcome?

An alert reader ought, at this point, to be capable of detecting J.R. Firth somewhere in the wings. The answer to these questions takes us ineluctably into Firth's taxonomy for Context of Situation (1937:110;1957:182;1968:108 - see Appendix G, below), where the relevant persons, personalities, will be a litigant, possibly lawyers (unless we have a self-acting litigant) and certainly a judge or chairman of a quasi-judicial forum. There will be verbal and non-verbal actions, and the results of the verbal action may be a finding that natural justice has either been upheld or breached. In the

latter case we ought either to see the judge create a remedy or, sadly, see the judge join the conspiracy: an event made easier (as mentioned above) by virtue of the fact that the uninitiated litigant does not understand the meaning, at law, of the term *natural justice*.

Of course, a fully computational Breal would have had access to the Bank of English and its programme entitled PICTURE, whose product for the term looks like this:-

Now, with the greatest will in the world, compelling computational evidence of this sort, would be unlikely to leave all but the most naive litigant continuing to pursue the 'naturalness' argument. Justice is not natural in the same way that yoghurt is natural. The made up examples of grammarians would be risible in so chillingly authentic a context as this. We cannot say: 'John received natural justice at the High Court'. If, as Firth (1968:106) avers, we 'shall know a phrase by the company it keeps', one could be forgiven for suggesting that this minimally stochastic fragment of running text has both fallen among thieves and, unjustly, continued to keep its apparent good name. The expression has seemingly been unaffected by semantic change, because it has been protected by an institution which itself does not change, a status which many institutions share with secret societies (hence the debate as to whether judges should be required to reveal their affiliations, if any, with secret societies, such as the Freemasons). Are we dealing with diminished responsibility or inherent wickedness?

Recourse to the concordance lines from the Bank of English, below, offers us a more complete picture of the term and its institutional role in the 'manufacture of consent' (see Fairclough, 1989), as part of legal and judicial ideology. Note that the course of future events to the right of the expression is altogether less clear than it is to the left. If there is no evidence of judicial intervention to rectify breaches of natural justice, does this mean that victims of the breach give up their cases (waiver, or the relinquishment of their claims) or do they ever sue the judge (joinder)? It is worth noting that if litigants began routinely to sue the judge where natural justice has been breached, there would be two likely consequences for the form *natural justice* in the corpus. Firstly, the collocates to the right of the form would begin to look less confused than they do at present, where eventual waiver is more than likely, perhaps after even further breaches have been suffered on appeal. Secondly, if all litigants persevered with their suits against judges, the term *natural justice* would also become less frequently observed both in the corpus and in life, as the litigants' actions began to act as a deterrent, resulting in judicial misconduct of this particular type becoming less frequent. However, regardless of the way one looks at it, references to *natural justice* are effectively references to 'event fraud': a litigant has come to court for a hearing leading to a

remedy; and instead of getting either, the judge may (for motives still to be determined) have joined the conspiracy to deny the litigant justice. We proceed, in the next section, to the graver matter of creating fake institutions expressly in order to extract waiver from human rights victims. Semantically the concordance below has the status of a Masonic handshake in print.

3. *Stochastic Processes and the Corpus*

To return briefly to the issue of instrumentation considered earlier, mention must be made of a further cause for suspicion within the community of linguists. Although we regularly find the superimposition of analogue instrumentation (by means of corpus annotation) upon the relatively freshly unveiled digital instrumentation of corpora, there is something else missing in 2003, which is indicative of less naiveté than one might have expected. Nobody is giving corpora the '-emic - -etic' segmentation treatment! No great fuss is being made about the nature of the minimal unit of running text. We are not seeing the arrival of the new science (good for at least half a dozen learned papers, if not a book) of 'stochastetics' and 'stochastemics'! If one asks *why* these terms have failed to burst upon the scene, the only reasonable response must surely be that they are *perceived* by linguists as *unnecessary*. One may argue that tagging, parsing and other conventions of annotation assisted lexicographers in creating the Cobuild dictionary and, with it, digital instrumentation; but now, one is witnessing a proliferation of the scaffolding rather than its dismantling. Is the motive for this anything but an attempt to obfuscate instrumentation's real goal?

However, once scaffolding has been taken down, the observer cannot but evaluate the building itself. It is possible perhaps to draw some or all of the following inferences: (1) that linguists have seen directly to meaning through corpora; (2) that they have felt no need to proceed to a science of segmentation, because the software for the sorting and manipulation of data takes them directly and effectively to meaning; (3) that the retention of excessive amounts of markup language perhaps fulfils some unspoken security need in the investigator, in the international community or within the 'new world order'. Could it be that direct access to meaning needs to be *rationed* and that if linguistics were to degenerate into a form of critical literacy, this would be a security disaster of some hitherto unstated kind (will all 'dodgy' dossiers be instantly detectable in the information age?); and (4) that the secret service and the spin doctors propose to **steal** the new instrumentation, whilst simultaneously denying that it ever arrived! The value of linguistics as a *distraction* from meaning in authentic text would not only be better preserved if instrumentation were stolen, but science could then be prevented from treating the interpenetration of textual and situational *truth* as its new Holy Grail (one more easily obtainable in the

twenty first century, and in less time than it would take to launch, let alone sail a vessel like the *Argo*).

In the context of The Truth and Reconciliation Commission, this would certainly be a danger, as the remainder of this paper will now proceed to demonstrate. Forensic evidence to the effect that the TRC constitutes *prima facie* 'event fraud' might easily constitute a point *in limine* in a class action to an international forum, with a view to having the purported outcomes of the TRC declared null and void and of no further force and effect. Victims would then be able to seek common **justice** and compensation, not from the class action brought on their behalf by lawyer Edward Fagan, as Archbishop Tutu has recently (1 August, 2002) suggested on world radio, but directly as a remedy from South Africa's Constitutional Court, appropriately recused and reconvened. The reason for recusal of the judges of this court would be conspicuous **bias**, because, as reported in the law reports of the Constitutional Court (Case No CCT 17/96), the litigants' names (Biko, Mxenge, and Ribeiro) are inexplicably omitted! Their names appear only in the law report of the court *a quo*, (Cape Provincial Division, Case No 4895/96). It is common cause that litigants must be treated as persons before the law. The omission of their names in reporting their appeal is inexcusable. The relatives of the following deceased activists: Steve Biko, Griffiths Mxenge and Chris Ribeiro were seeking a court order,

...directing that the respondents (TRC) be interdicted and restrained from granting any amnesty to any person in terms of the Act, pending the conclusion of the proceedings of the Constitutional Court.

These provincial hearings took place on 6th and 9th May, 1996. In what looks very much like indecent haste, by 25th July of the same year the matter was done and dusted in the Constitutional Court. The order of the Constitutional Court read as follows:

G[51] In the result, the attack on the constitutionality of s20(7) of the Promotion of National Unity and Reconciliation Act 34 of 1995 must fail. That was the only attack which was pursued on behalf of the applicants in this Court. It accordingly follows that the application be, and is, refused.

H Chaskalson P, Ackermann, Kriegler, Langa, Madala, Mokgoro, O Regan, and Sachs JJ concurred in the judgment of Mahomed DP.

The wording of the above Order invites discourse analysis, but a better course might be for the entire basis of the TRC to be vitiated by forensic evidence of the type proposed by this paper. This would, at least, involve no possibility of a revived TRC hearing matters *de novo*. Truth and justice would need to begin as legitimate due process. This new process would replace waiver, which has been extracted fraudulently. The nation wide recusal of those judges who connived with the TRC would need to be both a priority and a pre-condition.

Taking the TRC concept on the road to other countries would, if the action proposed above succeeded, become a non-starter. Sierra Leone, for example, now has a TRC and in August 2003, even Kenya was clamouring for one to be established. The first hearings of the Sierra Leonean body were held in mid-April 2003. However, this TRC operates differently from the way in which its South African counterpart did. In Sierra Leone, perpetrators of human rights violations will not, as in South Africa, be granted amnesty. If Steve Biko were alive today, he would probably offer a reason for this. He would probably have said that the perpetrators of injustice in Sierra Leone do not need to be 'saved' by a TRC designed by whites in the US and Europe. They are not white. The fraudulent nature of TRCs as a *modus operandi* would also need to be reversed in countries where the formula has already been used, such as in Guatemala (Appendix C, 93; Appendix D, 101). A huge operation would be involved in dismantling them, as TRCs and the 'mass justice' they purport to offer are currently planned for a growing number of countries.

3.1 Steps in the Process of SC Reading

In one sense, it would have been convenient if the question of the minimal unit of running text had already been settled. Sinclair (1991) offers the agreeably uncomplicated view of seeing the corpus, almost from the software's point of view, as strings and spaces.

It is best to use the word 'word' informally to mean what it normally means...a string of letters including hyphen and sometimes apostrophe - bounded on each side by a word space or another punctuation mark. (1991:176)

However, in relation to Sinclair's later research, which favours a more phraseological view, the position quoted above ought perhaps to be regarded as an early position, although he does not mention the subject in his most recent papers (2002). To extend Firth's metaphorical vision of collocates 'keeping company', within Sinclair's 'running' text, it is my opinion that we will either find them with one mind, running together, or disaffected in some way, trying to create a new, previously unobserved, unnatural convention (see below references to monitor corpora) and, hence, running apart. Respectively, these conditions will be referred to as **stochastic concomitance** (from Latin *comes -itis*, a companion, advancing Firth's view of collocates, as keeping company **naturally**, as in the taking of bread together, as the etymology suggests), or as **stochastic dissonance** (a lack of agreement or harmony in outcomes, or the 'results of the verbal action', causing them to 'sound' illogical or wrong). (See Appendix G). This dichotomy invites a link with critical thinking and critical reading, especially where outcomes are felt intuitively to be flawed or unjust. C.S. Peirce (in McPeck, 1981), who defined knowledge as a process of settling doubt and fixing belief, prompts us in the computational era to ask where the consensus of the corpus takes us. It is as though the language of the 'honest' in the corpus can now be mobilised in a virtual form to disclose and read the language outcomes of the dishonest. As honest language will

always predominate, it may be relied upon because, in New Testament terms, '... the darkness quenched it not'.

This semantic rather than strictly segmental approach must be seen as an extension of the techniques of corpus linguistics rather than an attempt to alter its basic groundwork. Yet it is entirely defensible, because now that the basic groundwork in corpus linguistics has provided us with digital instrumentation, our only destination, using 'running text' (obsessive-compulsive annotators aside) can be *meaning*. The delight of working with collocation is that it deals with nothing else but meaning. In any event, the decision to use stochastic units usurps nothing: each unit is, as noted above, less than 25% of any nine word window of collocative power and acts as a method of fine-tuning and 'slowing down' the increasingly rapid nature of computational findings. Fine-tuning of the narratives thrown up by successive transitions in the target text may also be possible in other ways, as this author discovered by chance. The first version of Microconcord, the software used for collecting collocates and concordances in this paper, invites the user of the collocator to select four words to the left and four words to the right of the node, but it then proceeds on every occasion and irrespective of adjustments made, to default to three words on either side. As it turns out, this suits the very short length of our target text even better.

In this paper, we consider a two word sequence as the minimal unit for which a collocative profile can be sought from the corpus for the purposes of conducting a stochastic collocational (SC) reading. The term 'running', to refer to running words and running text, would seem to support this. It also breaks the Chomskyan tyranny of remaining within the sentence. Hence, the serial profiles from which such a forensic reading for 'The Truth and Reconciliation Commission' will entail at least *four* steps. Note that the + sign has no theoretical or descriptive significance. As we are dealing exclusively with meaning, issues of description have become reified elsewhere and now properly belong to the history of linguistics. The + sign is merely part of an instruction to the Cobuild 'Lookup' programme, which also requires that requests be presented in lower case:

Four Step Request to The Bank of English

```
1         the+truth
2         truth+and
3         and+reconciliation
4         reconciliation+commission
```

Further requests of a corroborative nature may be required later in the reading, to which we now proceed. These will be incorporated in the body of this paper and not in the appendices. Note that concordance lines requested are in the form of 200 line probes of the BOE, transmitted to the author in Zimbabwe, via the Cobuild Direct Mail Service (cdms@cobuild.collins.co.uk). Where the total number of lines extracted from the corpus falls short of approximately 200, this will be deemed to be the total number of lines to be

found in the corpus for the stochastic pair concerned. The concordance lines themselves are set out in full in the Appendices, starting with the form **the=truth** in Appendix A. Collocational profiles for these concordance lines will be worked with directly step by step in the body of the paper.

Step One

It is perhaps worth contextualising the TRC historically. In June 1995, *The Times* carried a report by Christina Lamb entitled: 'Delays damage hope of justice in South Africa'. In this report she offers her own explanation for the invention of the TRC:

The truth commission was thought up as a safety valve for pent-up hatred after the decades of white rule. It would explore outrages by all sides and award compensation to victims and amnesty to killers and torturers. But there has been so much delay that relatives of the dead are demanding trials instead.

Ntsiki Biko, the widow of black consciousness leader Steve Biko, who died in police custody in 1977, and Churchill Mxenge, brother of an anti-apartheid lawyer assassinated in 1981, have formed an Association of Victims of Unsolved Apartheid Atrocities to campaign for the prosecution of security force members.

'When we voted the new government into office we nursed hopes that the law was going to take its course,' said Mxenge. 'Instead, we find ourselves exactly where we were 10 years ago. The only exception created by the truth commission is that if the criminals tell the truth, they will be forgiven'.(emphasis added) (The Times, 18 June, 1995)

In a world in which war crimes' tribunals are set up for atrocities in some countries and truth commissions are 'thought up' in others, reasons for this expedient disparity need to be sought. The remainder of this paper traces what is involved within the dynamic of a large corpus of natural language when the expected course of events *in the world* is altered unnaturally. How can a corpus assist the victims when a nation hoped '...that the law was going to take its course' and it *inexplicably* does not do so. Expediency rather than logic governs the process and corpora care nothing for expediency. Bosnia has no great mineral wealth and this may be what entitles it to war crimes' tribunals: to justice rather than waiver. South Africa has massive deposits of gold, diamonds and platinum and so instead of being provided with justice, international financial interests think up ways of enforcing waiver and the granting of amnesty to killers. Racism and revenge are also motives. In the quotation with which this paper begins, Biko predicted that the racists would set out to defeat and pervert the ends of justice rather than award it. Rwanda has a War Crimes' Tribunal because in Rwanda the genocide was felt to be 'black-on-black' rather than post colonial. In reality, much of the enmity between Hutu and Tutsi factions was fomented by colonialism.

The most pernicious aspect of waiver is that the beginning of the process which leads up to it often resembles the process of justice itself. This is also true of national independence, especially when it can later be shown *not* to have brought economic independence. As TRCs have begun to proliferate, notwithstanding the flawed logic upon which they are perched, semantic prosodies (Louw, 1993) and other computational linguistic methods, such as SC reading, are beginning to detect the insincerity behind their invention. TRCs are currently being referred to as forms of *mass justice*. Using semantic prosodies, it can be verified that the '*justice*' purportedly on offer in this phrase is ***insincere***. We know this to be the case because the term is qualified by *mass*. It must therefore be 'read' by the most frequent collocates to the right of *mass*. These collocates are mentioned below in the closing paragraphs of this paper.

Concordance lines for a request to the BOE for the+truth appear in Appendix A. A list of collocates for this stochastic pair appear below. Note how the collocates have their own 'narrative' which marches in step with Mxenge's '*...if the criminals tell the truth...*'.

Step One: Collocational Profile for the+truth

Collocates: 3 to left & 3 to right of the truth

AND	213	THE	63	TO	55	IS	28
TELL	25	YOU	23	I	19	RECONCILIA*	19
THAT	19	COMMISSIO*	18	HE	18	KNOW	16
IT	16	TRUTH	16	OF	16	TELLING	15

The profile above represents only the most frequent collocates. They reflect perfectly the wishes of all parties: the architects of the TRC hope that *telling* the truth and *knowing* the truth will somehow defuse the hopes of the victims' families for retributive justice; and, the families of the victims need to *know* the circumstances surrounding the death of their relatives (withheld for many years by the Apartheid regime) so that they can complete the process of mourning. Note the huge accumulated frequency of *tell*, especially once all of its forms or lemmas have been added together.

It is worth noting that the repeatable event associated with the+truth ineluctably involves **telling** the truth. Furthermore, the segmentation along the lines of analogue instrumentation, e.g. the 'stochasteme' would not withstand scrutiny. 'Knowing the truth' would not be an 'allostochast' of 'telling the truth'. Knowing the truth ought to favour the process of justice without being used to defeat it, thus further denegrating the victims. We shall see how this turns out as we progress through the remaining steps. If it existed as a discipline, 'stochastetics' would obfuscate what is simply a familiar and frequent form of narrative. Narrative is a legitimate forensic tool in a world which has access to full instrumentation for language. Further corpus annotation would only play into

the hands of the TRC's architects.

The process of waiver is often accompanied by the subornation of those who are determined to obtain justice. Such attempts are often reported in the press. The following vignette of one of Nelson Mandela's reconciliatory visits to undismantled (even as I write) bastions of white power shows something of the dilemma.

...Then Mr Mandela hosted an extraordinary tea party where the widows of former Afrikaner politicians mingled with the wives and widows of leading black politicians. This was a resounding media success although there were some sharp intakes of breath at the thought of Steve Biko's widow sipping tea with Mrs Vorster, the widow of B.J. Vorster, who was Prime Minister when the anti-apartheid leader was tortured to death in police custody. The Afrikaner ladies were full of praise for the President's legendary charm but Mrs Biko made it clear that her family still want to take her husband's murderers to court and have not forgiven them.

(Source: The Times (22 August 1995) 'Mandela's reconciliation tea party leaves blacks with a sour taste', by R.W. Johnson)

Step Two:

The concordance lines for truth+and are located in Appendix B.

It is at this point that we may begin to reconsider Christina Lamb's view that the TRC was 'thought up'. The collocates invite us to see her terminology as an understatement. The dominance of the collocation profile by the term reconciliation must surely begin to strike the reader as suspicious. How does something which was thought up begin to dominate the very corpus which we had come to regard as a reliable reflection of the structure of language, culture and events? Has the effect of the advent of the TRC effectively been to 'buy space' in the corpus? Is a corpus a form of textual real estate which, in all likelihood, harbours squatters? (see Appendix J, in which there are as few as three references in one hundred to the crucifixion in a KWIC concordance for good+friday. This situation was caused by the decision, possibly by Peter Mandelson MP, to name a peace accord after Christendom's most holy day). However, to return to our reading, we need to ask whether the collocate justice has been downplayed by the new arrival? Or are we seeing the deliberate thwarting of justice, both in the world and in the corpus? Can corpus linguistics offer us a diagnosis? The collocational profile appears below.

Note that even if truth+and were not intended to be read as part of a chained event, the term and would probably be felt, by a senior devil such as C.S. Lewis's Uncle Screwtape, to be suggestive of desirable forms of semantic dilution:

My Dear Wormwood,

The real trouble about the set your patient is living in is that it is merely Christian...What we want, if men become Christians at all, is to keep them in the state of mind I call 'Christianity And'. You know, Christianity and the Crisis, Christianity and the New Psychology, Christianity and the New Order, Christianity and Faith Healing, Christianity and Psychical Research, Christianity and Vegetarianism, Christianity and Spelling Reform. If they must be Christians let them at least be Christians with a difference. Substitute for the faith itself some Fashion with a Christian colouring.

(C.S. Lewis, *The Screwtape Letters*.)

Step Two: Collocational profile for truth+and.

Collocates: 3 to left & 3 to right of truth and

THE	106	TO	32	OF	30	RECONCILIA*	20
COMMISSION*	17	FOR	16	AND	14	IN	14
A	13	THAT	11	P	11	TELL	11
HE	9	IT	8	BUT	7	IS	7
AN	7	WE	6	I	6	ARE	6
WITH	6	TELLING	5	JUSTICE	5	NOT	5
BETWEEN	5	BY	5	YOU	5	TRUTH	5
THERE	4	SHE	4	BEAUTY 4	UP	4	
FROM	4	TOLD	4	LIES	4	WHO	4

The lower end of the frequency profile above presents a much more gentle and humanitarian start than the upper end: the BOE is so large, well sampled and accurate, that it is even sensitive to the Keatsian relationship between truth and beauty. However, the seriousness of the infiltration deepens very quickly as we ascend. *Tell* and its lemmas are, of course, still within the collocative window, but notice what has happened: between them, the lemmas of tell can now only equal, rather than surpass, the frequency of a new apparent interloper: *reconciliation*.

It would be tempting to dismiss the term as part of a fixed expression, but would this do justice to what is going on? We are being presented with what, in Markovian terms, is a chained event. The shadowy authors of our target text composed it deliberately in a very particular way, so that it could *only* be read in that way. We need to remind ourselves of Churchill Mxenge's narrative above and compare it with the narrative which is being supplied by the collocates from the BOE as our analysis progresses:

'...The only exception created by the truth commission is that if the criminals tell the truth, they will be forgiven'. (*The Times*, 18 June, 1995)

The key question is: 'What might the victims have expected from the justice system if this were not the case?' Is waiver being enforced? If so, by whom?

Is it the bench or the state or some foreign power or the New World Order, or a combination of these? Are secret societies involved, and if so, at what level? Perhaps we need an active rather than a passive form for Christina Lamb's sentence:

The truth commission **was thought up** as a safety valve for pent-up hatred after the decades of white rule... (Emphasis added)

It is also instructive to examine at least one other collocate which appears in Step 2 as we work our way towards the top of the frequency range, because it marks another repeatable event within the TRC's brief: *apparent process*. The inventors of the TRC may be bent on extracting waiver, but if the conspiracy is to succeed, this must be done **plausibly**. There must be *apparent process*, during which the veracity of what is brought before the TRC is seen to be tested, albeit insincerely and hence, fairly half-heartedly. When the method of SC Reading is used, *there will always be a narrative to tell us how the majority of the collocates are 'minded'*, to carry Firth's analogy of 'keeping company' further. True collocates should always outnumber 'rogue' collocates. Where rogue collocates appear to dominate, they will do so in ways which are suggestive of learned or fixed expressions. As a result, the notion of naturalness may need expansion to embrace the idea of naturalness across large swathes of the corpus. It would be a form of 'virtual' naturalness. This underpins the basis of the type of forensic reading which this paper proposes.

The collocate which enshrines the notion of 'due process' is *between*. It occurs five times. The history of the TRC and its work is of no great relevance to the concerns of this paper. Only the victims will be able to relate whether their testimony was brushed aside on technicalities (such as an inability to prove a political motive; or where some of the crimes occurred geographically outside South Africa, as occurred in the case against Dr Wouter Basson. Basson was fully acquitted of wrongdoing at the end of his trial in South Africa. The question of noting an appeal continues to surface from time to time. In his case a large number of Namibians he was alleged to have killed, were ruled by the judge to be irrelevant to his trial in South Africa (*sic*). Perhaps the murderers' testimony was accepted in a very truncated or perfunctory form by the TRC. If this occurred, we would need to know how often it did so. If the outcome was driven by an obvious desire for waiver, some of these symptoms would have been extremely likely to appear. The victims, between them, could doubtless, even now, assemble a list of abuses of process towards the mounting of a class action and/or the prosecution of an appeal.

Once details of this kind became known, forensic linguists could analyse each case, in turn, as examples of 'thwarted events'. However, knowing or telling the difference *between* truth and lies would have been expected as part of due process in a pre-New World Order and a pre-TRC world and the concordance which follows is added in order to demonstrate that expectation, even though it forms no explicit part in the wording of the target text under investigation.

It would be far too convenient for us, or for deeply perturbed counsel, or for the South African Government and its allies, to argue that we shall never know what the state of the language and the corpus was in a pre-TRC

world. They would doubtless like us to accept the collocability of *truth* and *reconciliation* as a *fait accompli*. Remember, instrumentation for language arrived in 1985, when the apartheid regime was still fully entrenched and involved in its 'final onslaught' against its opponents. It is impossible to know whether Sinclair's research was being monitored secretly in the 80s and, if so, when this process began. His first corpus project conducted between 1965 and 1969 is only now being fully reported (Sinclair: personal communication). However, rather than attempt to trace the contents of the corpus during its development in the early 90s, as this led to the formation of the BOE (for example, 33 million words were available as part of any single request in 1992), it may be better to test our hypothesis, as far back as the advent of digital instrumentation in 1985, that *truth* and *reconciliation* are **utterly unrelated** collocationally. This is possible through access to the Main and Reserve Corpora upon which the first edition of the Cobuild English Language Dictionary was based. The proof, if any were needed, is contained in the following concordances from that ground-breaking corpus, which totally disproves the prediction John Lyons had made only a few years earlier:

Nevertheless, there are many practitioners and theorists of the social sciences who seem to feel, quite wrongly, that there is something unscientific about the postulation of entities and processes that cannot be described in physical terms. Thanks largely to Chomsky, this feeling is now less common than it once was among linguists; and linguistics is, in consequence, a richer and more interesting discipline. (Lyons, 1981:244)

With hindsight, these words seem reminiscent of the speech made by Neville Chamberlain in 1939, after he had received reassurances on a scrap of paper from Adolf Hitler to the effect that war could be averted. Linguistics was, as Lyons wrote the paragraph above, already a harder science than he proposed or even believed possible. In 1981, Cobuild was being developed largely under wraps. Without Lyons's knowledge, linguistics was already unlikely to settle willingly for the reductionism to intuitive pap of its scientific method. The crucial evidence from the first large Cobuild corpora has, below, been carefully re-keyed from the microfiche on which it appears. *Truth* and *reconciliation* are simply **not** collocates in 1985.

 Lexicographers' Microfiche Sheet R 005)

3.1.1 *The Role of Monitor Corpora*

Corpus development is always concerned with the question of balance. Sinclair (1991) was the first scholar to use a monitor corpus, whose function he describes initially as follows:

...it became clear that the whole idea of a corpus of finite size was flawed. Any corpus is such a tiny sample of language in use that there can be little finality in the statistics...The idea of a *monitor corpus* was born. Sources of language text in electronic form would be fed on a daily basis across filters which retrieve evidence as necessary. (1991:9)

The concept becomes more powerful and exciting as corpora become larger and Sinclair looks forward to a time, which has now arrived, where it is

possible 'to create a new kind of corpus, one which has no final extent because, like the language itself, it keeps on developing' (1991:25). This vision may well be in the process of being end-stopped by HarperCollins publishers. Cobuild staff have been reduced to one part-time individual and plans for a third edition of the dictionary appear either to be stalled or have been abandoned. However, whatever commercial decisions are made, the central academic and disciplinary commitment set out above by Sinclair remains unaltered.

The design features of the monitor corpus are determined by the researcher and this suits the concerns set out in this paper. Although one of the filters used at Cobuild during corpus development (called AVIATOR) provided a daily list of 'new' words which it had found, it may not have been up to the task of detecting new institutions, such as the TRC, or indeed the presence of invented or 'rogue' collocates, such as *reconciliation* entering *truth*'s collocational window, and *vice versa*. However, if these refinements were missing, they could today be set in place quite easily. To suggest that the political will to do so might need to be found would be unacceptable and an open violation of academic freedom of the type referred to in an earlier footnote.

There is evidence also in the superb Cobuild Dictionary of English Collocations on CD ROM (1995) that monitor corpora missed the arrival of *truth* within four words of *reconciliation*. This evidence is easily detected in the obvious difficulty experienced by at least one of the CD ROM's human compilers. In setting out and dividing up the screen for the examples of *reconciliation* in the environment of *truth*, the lexicographer is seemingly forced to **repeat** lines through sheer frustration at not finding occurrences of these purported collocates which are both **sufficient** and **varied** to warrant inclusion in a dictionary. **Apart** from the fixed expression 'TRC', and references to the way it purports to function, the collocates *truth* and *reconciliation* simply do not come up within the corpus and in everyday contexts at the time of the CD's compilation. Hence, that portion of screen space reserved for creating a sense of **balance**, had somehow or other **to be filled**, and the lexicographer was forced to resort to **repetition** (see below). That the line '...seeking their reconciliation...' should have to appear **twice** (6&7) and the line '...no reconciliation, until...' appear **three times** (15-17) on a screen of only 20 or so examples, is conclusively indicative of the fact that any significant free-standing use of the collocate in 1995 is non-existent. This finding corroborates the situation reported above in the Reserve and Main Corpora of 1985. Even the repeated lines appear to be confined to explanations of the obtuse workings of an invented institution, busily driving forward its main agenda of securing waiver from the victims of *apartheid* in South Africa. Compare what follows with the contents of Appendix F, which comprises the product of a search of the Bank of English for the expression truth+3justice. The facility for finding *justice* within a specifiable distance from *truth* is both a triumph for those who programmed the old version of 'Lookup' and a vindication of the superiority of collocation over stochastic processes, important though the latter are, in determining chained events and fraudulent departures from

them.

(Source: The Cobuild Dictionary of English Collocations on CD ROM, 1995)

This evidence is of greater importance than one might imagine. In order to appreciate its full implications, one has to return to Markov and his research. One of the key issues in more recent attempts to revive Markov's approach has been the creation of Markovian automata in order to mimic natural language through the prediction of the probabilities of transitions. The automaton can never produce natural, authentic English text. A major experimental consideration has always been to determine which *fails* first: the machine or the human being? Our target text involves about four transitions. An automaton which fails after two transitions produces text like the first passage below, reported by Levelt (1974, Vol.II: 165). The second passage quoted is a fourth order text, closest in Markovian terms to our target text; the fifth order text which follows it, dutifully fails after five transitions, and so on (1974, Vol.II: 168).

SECOND ORDER: *the head and in frontal attack on an English writer that the character of this point is therefore another method for the letter that the tired of who even told the problem for an unexpected...*

FOURTH ORDER: *went to movies with a man I used to go toward Harvard Square in Cambridge is mad fun for...*

FIFTH ORDER: *road in the country was insane especially in dreary rooms*

where they have some books to buy for studying Greek

In the case of our target text, the Markov process would **not** fail on an input file such as all of the BOE, precisely because its authors have furnished, in the form of electronic newspapers, adopted into the BOE, the very probabilities which are required in order for the deception to hold. This is precisely the problem Cherry (1957:39) mentions at the beginning of this paper. However, this time the transitions would always be the TRC's transitions, not Shakespeare's! However, if the input file were the Cobuild Main and Reserve Corpora as they stood in 1985, the fourth and fifth order Markov automata would fail, because there was at that time no transitional probability between truth and reconciliation. It had still to be created as a form of '**event fraud**' in terms of Contextual Prosodic Theory (Louw, 2000). Yet, *justice*, as a collocate, would **not** suffer the same fate, whichever corpus was used. It is the older legitimate event, whose ends had to be perverted and defeated by and through the creation of the TRC.

To answer the question of which fails first, the Markovian automaton or the human reader, the answer is that the human reader fails. This is because human readers from all walks of life, lexicographers, the general public and the apartheid victims themselves have been converted into **sane** rather than Markovian automata, who will **accept** rather than **question** a fraudulent chunk of language because it has been cunningly presented to them and has the entirely dubious *locus standi* of repeatedly appearing in **print**. Theirs was a failure of critical literacy in the information age³. It is significant, too, that the fifth order passage quoted above was reported by Chomsky and Miller

³The extent to which deception is still possible in the information age must, as a result of this paper and other developments in corpus linguistics, be considered to be in doubt. The concordance for carlyle+group (Appendix I), completely undermines American and British attempts to justify their own role in the war against Iraq. The family of George W. Bush not only employs a former British Prime Minister and other British MPs, but owns companies which manufacture weapons, tanks and rockets. In addition, the Carlyle Group has the bin Laden family on its list of investors. The concordance states that Carlyle and bin Laden agreed to part company by 'mutual consent' shortly after the 11th September 2001. A failure to mention these facts as part of the campaign for war in Iraq, not only brushes aside glaring conflicts of interest, but, considering that the Bush family is likely to profit from every shot fired, must be considered apparent fraudulent non-disclosure. Details such as these must, of course, be read along with the plagiarism of an eight year old doctoral thesis by staffers at 12 Downing Street, in order to justify war as a clear and present danger. Material in the concordance will also exacerbate matters which led to the death of Dr David Kelly.

The date and time of the concordance request have been included in Appendix I, because Jeremy Clear of Cobuild reported a few days after this date, that the Bank of English had been entered by hackers.

(1963). The former dismisses Markov grammars in 1957, but is still, inexplicably, researching them on the eve of his scathing attack on corpora in *Aspects of the Theory of Syntax* in 1964. Why? Perhaps the man who, more than any other, was to keep the community of linguists operating inside the mind for almost 50 years, foresaw, even within flawed and (then) computationally simplistic Markov processes, the possibilities that both instrumentation and a rival to intuition might begin to emerge. As a result, the retreat into mentalism quickly acquired or was given its much-vaunted status as 'The Chomsky Revolution'. In any event, the motives for this protracted dabbling in Markovian processes by one whose '...distaste for "statistics of usage"...is now legendary,' (de Beaugrande, 1991:186), must surely warrant further scrutiny. That a man whose equally legendary liberal politics should seek, in his linguistic theory, to eschew authenticity and functionalism and champion instead *intuition*, and even then *only* within the political comfort zone of the made-up sentence, also points to the need for further investigation. The politics of linguistic theory must itself now have become an open subject for corpus-driven investigation.

Even if stochastic probability and semantic prosodies, between them, had been inadequate for the purpose of persuading the victims of apartheid to waive, traditional psycholinguistic research would probably, at the time the plans were laid, have done the job just as easily. The same G.A. Miller, who had collaborated with Chomsky in the Markovian research referred to above, is reported by Levelt to have demonstrated in 1962:

...that verbal memory is particularly sensitive to the grouping of words into units of a certain size, and ... in the perception of speech ... size roughly corresponds to the phrase, i.e. nominal, verbal and other linguistically defined phrases containing two to six words. (Levelt, 1974, Vol.III: 75).

At five words, our target text, which continues to deceive millions of human rights victims who have a cause of action, would seem to fall comfortably within Miller's optimal window of verbal memory. Thus we see a form of language which purports to mirror legal process, fitting in with all the implications for recency effects and suasion that Miller's psychological research saw as a major part of its objectives.

Step Three

The concordance lines for and+reconciliation are located in Appendix C.

In the chained event with which we are working, the replacement of *justice* as an expected outcome, with enforced waiver in the form of *reconciliation*, is handled with great skill by the lawyers and spin doctors who must have thought up the TRC. Both collocates are made to seem like '**rewards**' of equal value. However, as Churchill Mxenge notes earlier, the only thing which singles out the TRC as exceptional is the fact that it is the *criminals* who are rewarded with forgiveness. The **choice** of going to trial is not afforded the victims, even on constitutional appeal. The Constitutional Court of South Africa dismisses the Biko appeal for ordinary justice. Its apparent

bias is reflected in the fact that the appellants before the Constitutional Court are **unnamed** (in the law report of the Constitutional appeal) and, hence, apparently not regarded as persons before the law in the new South Africa any more than Steve Biko was under the apartheid regime. This situation bears out Biko's chilling prophecy quoted at the beginning of this paper. Even the new leaders of an independent South Africa seem to have gone out of their way to profane his memory. This is the kind of omission that reverses the gains of the revolution and causes the new government and its activities into the future to be regarded with suspicion. Australian journalist, John Pilger in a BBC *Hard Talk* interview noted with concern that South Africa has not been allowed economic independence.

And yet, as we read our target text, there is a sense that the victims are getting some form of reward. How is that false sense of reward created? It is created fraudulently within the victims' prior knowledge of language, but *without their **conscious** awareness!* It is in Step 3 that the spin doctors are at their most cunning: they use an extremely rare form of semantic prosody, i.e a *positive* semantic prosody (Louw, 1993), to sell the idea of waiver. The semantic prosody operates on the term *reconciliation*, and this runs from *right* to *left* in this case, in apparent conflict with the stochastic process. In the language, negative semantic prododies far outnumber positive ones. Hunston and Thompson (2001:18) refer to the phenomenon and Joanna Channell refers to it in detail, in the same volume, in a chapter entitled 'Corpus-Based Analysis of Evaluative Lexis' (2001:38-55).

The positive semantic prosody carries with it a full range of desirable characteristics and states. All of these accompany reconciliation 'as equals', because the stochastic pair is and+reconciliation. Note the huge frequency of *forgiveness* in the table below. The collocates within their prior knowledge as readers, are borne in upon the troubled minds of the victims as an *illusory* haven of peace and deliverance. However, it is not only all in the mind, as Steve Biko foresaw in the quotation with which this paper begins, but it is still an illusion on the ground today, within months of the TRC's already postponed purported final report. Archbishop Tutu, the Chairman of the TRC, as recently as August 2002, is quoted on the subject of the class action being brought in Switzerland by lawyer Edward Fagan against banks and companies who benefited from apartheid. Tutu's view is that the private sector ought to compensate apartheid's victims in the same way that holocaust victims have finally and reluctantly compensated as a result of Fagan's earlier class action to assist them. Can there be a better admission from the TRC's own chairman, that the proposed compensation, which has already been drastically trimmed to 40,000 Rands per victim (from R130,000) is a paltry sum which degrades the victims further. The victims' cause is further villified as the government in its public advertisements refers to the matter as 'healing the past'. Most people probably thought that compensation was to have been collected from the TRC itself. The sad fact though, is that waiver is waiver, especially when it is dressed up and the right to compensation, *de jure*, evaporates with it. However, we now need to study the language in greater detail in which the fake reward is enshrined.

Step Three

Collocates: 3 to left & 3 to right of and reconciliation

THE	91	TRUTH	69	COMMISSION*	58	PEACE	50
FOR	46	OF	45	IN	26	AND	25
TO	23	THAT	21	SOUTH	16	FORGIVENES*	15
AFRICA 14	IS	10	P	9	THAT	9	
HE	9	ON	9	COMMITTEE	7	NEW	7
WAS	7	JUSTICE	7	BE	7	BUT	7
WHICH	6	REPORT 6	WE	6	BEFORE	5	
THIS	5	IT	5	AS	5	HAS	5
HEALING	5	BY	5	HAVE	5	MR	5
FORUM	4	UP	4	NOT	4	PROCESS	4
WILL	4	THROUGH	4	SERVICE	4	DIALOGUE	4
WORK	4	ARE	4	SET	3	SPIRIT 3	
TIME	3	AT	3	LOVE	3	CO-OPERATI*	3
UNITY	3	ONE	3	CALLED 3	PERSONAL	3	
BEING	3	WITH	3	FROM	3	SEEKING	3
SAID	3	H	3	ALL	3		

Any attempt to disengage from the implications of this positive semantic prosody would seem ungracious, unChristian, unpatriotic and vengeful. Another reason why the prosody is so powerfully positive is because it is positive to the right as well as the left! Its aura drives us in both directions to imbue the chained event with a sense of peace and *stasis* which, **in reality**, it does not possess. Just in case the bewildered victim wished to ask as part of his or her own personal narrative, '**...and then what?**', we find that the prosody on reconciliation+and is arguably even more compelling. Its concordance lines appear in Appendix E. It is in these lines that we find the unkindest cut of all for the victims: the re-emergence of the collocate which the spin doctors expressly set out to hide: *justice* (Appendix E, 61-64). The victim who has waived and can expect **nothing** at all, must now be persuaded by the collocate *justice* that he/she has received justice as part of waiver. Treason has done its work. The ideological strategy is to ply the victims with the collocates, e.g. *healing* in the form of propaganda (Appendix C, 36-40; Appendix E, 46, 47, and 143). Louw (2000) notes the following example in which a victim is incapable of believing and therefore of stating **sincerely** that the TRC has brought about healing. Instead the victim uses the term **cause**, which here is not only indicative of insincerity, but symptomatic of trauma.

The same form of insincerity applies to the language used by the TRC's proponents, when they refer to the TRC's activities as *mass justice* or even to *spreading justice*! The term *mass* writes its authors' insincerity through the term's most frequent collocates: *murder, destruction, grave, unemployment*, etc. How can waiver possibly be justice? The answer is: 'Only in the mind of someone who could allow the corpus to **read them** for having called their own treason *mass justice*!' It is reminiscent of Tacitus's famous line: *Solitudinem faciunt, pacem appellant*:' They make a desert and call it peace.

Where the spirit of a TRC fails, it is useful to have statements by a distinguished judge in charge of the UN War Crimes' Tribunal for Rwanda, Mrs Navanethem Pillay, who also appears inexplicably, to have forgotten the distinction between retributive justice and waiver. This apparent amnesia has apparently earned rather than prevented her recent elevation to the bench of the International Criminal Court [ICC].

Truth and Reconciliation Commissions are expedient political solutions devised by governments to deal with the past, to deal with atrocities of past regimes...In many countries, such as Cambodia, you have many members of the past regime and current government still sitting in power. There I imagine they would have difficulty in prosecutions or truth commissions dealing with atrocities committed by the very people who are still holding power. ***I see The Truth and Reconciliation Commission and prosecution as complementary processes. They go together...They are not in competition. The South African Truth and Reconciliation Commission certainly did not rule out criminal prosecution. People have been prosecuted, where it was found that the crimes that they committed were serious, or they had not come out with the truth. To families, such as the family of Steven Biko, who had been murdered in detention, these were dissatisfied because their rights to prosecution and compensation were denied by the Truth and Reconciliation process.*** (emphasis added) (African Legal Aid: April-June 2001)

In this interview, we find a deliberate attempt to make TRC and prosecution sound as though they are virtually identical. The learned judge confesses that the TRC 'did not rule out' criminal prosecution, but she then goes on to criticise Biko's family for being dissatisfied and then admits that the TRC denied them the right to launch a prosecution against his murderers. She makes no reference to the fact that the Constitutional Court of South Africa is **not** an extension of the TRC, but, in the event, chose to behave like one. Mixed messages of this kind bring institutions into disrepute. They show disrespect for national heroes and degrade the victims further. The findings of this paper bear out the judge's view that TRCs are 'expedient political solutions'. But, does the process of their manufacture show in what they are **called** and do they truly have the status of due process? The same event in The Bank of English, a corpus of language from and for a people of Europe would suggest not. As Biko predicts, the courts have joined the conspiracy and '...anything else they do to the same black people becomes *logical*'. Such logic cannot but tarnish the justice system and prompt change within it.

Step Four

The concordance lines for reconciliation+commission appears as Appendix D.

The search for reconciliation+commission can almost be dispensed with. The TRC is resident in the corpus with so little variation that we may safely omit the list of collocates. The TRC is homogeneous, just as its architects

planned. The damage has been done. The product now has to be given the seal of authority. Waiver is somehow fundamentally noble and has to be enshrined as a Commission! Of course, *waiver* has, by now, been cleverly equated with *healing* and *forgiveness* as part of the plan to manipulate the operation of everyone's prior knowledge. Waiver is part of nobody's tradition and culture. Only the weak, tortured, depressed and diffident waive. It is a sign of cowardice. But, forgiveness is a different matter: it is proof of the spirit of humanism inherent in African culture. It even has a name: **Ubuntu**. Perhaps *ubuntu* now has the status of legislation and overriding precedent. The Constitutional Court of South Africa certainly seems to think so. *Ubuntu* is no longer optional. It is mandatory. It is hoped that the TRC will keep 40,000 aggrieved victims of apartheid out of the courts. This may free the people's courts for their more important role as instruments for the indirect rule of independent South Africa.

4. Conclusion

The need to write this paper might have been averted if the architects of the TRC had called their Commission by some other name. Spin doctors invent names every day. There would have been no fraud in calling it the New Dawn Commission or the Sunrise Commission. This paper had to be written because TRC, as a title, purports to offer the **illusion** of process and of precedent. Tragically, many South Africans who deserved better from their country's institutions, have been deceived by a form of language into abandoning their claims, or have been forced by the highest court in the land to go without a local remedy. However, a well known legal maxim is that process perched upon fraud will collapse and become null and void and of no further force and effect. International remedies beckon.

APPENDIX G

A key concept in the technique of the London group is the concept of *context of situation*... The context of situation for Malinowski is an ordered series of events considered *in rebus*.

My view was, and still is, that 'context of situation' is best used as a suitable schematic construct to apply to language events, and that it is a group of related categories at a different level from grammatical categories, but rather of the same abstract nature. A context of situation for linguistic work brings into relation the following categories:

- A. The relevant features of participants: persons, personalities.
 - (i) The verbal action of the participants.
 - (ii) The non-verbal action of the participants.
- B. The relevant objects.
- C. The effect of the verbal action.

(Firth, 1950, reprinted 1957)

APPENDIX H

of Part I of the Schedule to the Regulations provided that the decision of an adjudicator would be binding on the parties until the dispute was finally determined. The defendant alleged that the adjudicator's decision had breached the rules of natural justice, and was therefore not a valid decision. The defendant's primary submission was that the meaning of 'decision' within section 108(3) of the 1996 Act and paragraph 23 of Part I of the Schedule to the Regulations was 'a lawful and valid decision'.

contracts on a provisional interim basis, and for requiring adjudicators' decisions to be enforced pending the final determination of such disputes. His Lordship noted that it was very easy to challenge a decision based on an alleged breach of natural justice, and an unsuccessful party before the adjudicator would need only to make such a challenge in order to prevent the decision's enforcement. In his Lordship's judgment, if Parliament had intended to qualify the word 'decision' in some way then that

colleagues. The Ethics and Integrity Committee has set itself up as if a miniature court of law rather than a mere sub-committee of a political party: it has to be chaired in private by a Queen's Counsel, to operate according to the norms of natural justice, and to offer its rulings subject to appeal to a person who must have held senior judicial office. If Sir Timothy Kitson, the former MP who first attempted to place Lord Archer before this body, had succeeded in his bid he would have been required to

and should have made inquiries as to the existence of the report. In those circumstances, although there was no suggestion that the inaccuracy of the officer's evidence had been either deliberate or fraudulent, there had been a breach of natural justice and the proceedings had been unfair. Although there obvious difficulties in re-opening the matter, the only new evidence was documentary and it would be possible for the Board to consider whether the doctor's evidence changed the picture in the

Liberal Democrat group. David Rendel MP, Liberal Democrat local government spokesman, called for an inquiry by the district auditor into the allegations made by Mr Crofton and into the hearing against him. 'The council is in danger of breaching natural justice, and therefore an independent inquiry should be set up, as Hackney is clearly unable to regulate itself correctly in this matter,' he said. Hackney said last night that the committee was still quorate. 'Clearly everyone's best interests will be

of heart. Bereaved families of those who die in custody will already gain the consolation of the truth about their death, promptly and with care. It will not bring their lost one back to life, but knowing the truth itself is a step towards natural justice, and coming to terms with their loss. Roger Graef is a filmmaker and criminologist.

officers all having assumed that someone else had cautioned the prisoner. In his summing up, Gilbert described the police case as a "disgraceful example of a police force under enormous pressure to produce a culprit, violating both the rules of natural justice and my client's civil rights". He added: "There is not, and there never was, enough evidence to arrest my client, let alone charge him and send him for trial. An obviously innocent man, who is also a vulnerable person, has been arrested, assaulted,

and now found the wall units were cracking and they were unsaleable. In the country as a whole, there were 4500 such homes, some owner-occupied, some tenanted and the government could not abnegate responsibility for the defects. She demanded "natural justice, and no less". The Housing Minister responsible, Sir George Young, an agreeable Tory "wet", was wisely sympathetic and promised help. It came five months later, only a week after she was reconfirmed as a member of the Chairmen's Panel (still one of

elected politicians and their officials. <p> Often for the initiating power to reject the rights of workers or the opposing group - is to reject a whole range of ethical values <p> freedoms of speech and rights to information civil liberties, natural justice and equal opportunity public vilification of the selfish and exploitative exploitation of the environment to the detriment of the world <p> The earth-friend protestor dug into a badger set to delay civil engineers clearing trees for the Newbury by-

the power of any mortal to erase or obscure. Well before the Declaration of Independence, Americans recognized inalienable rights, although not being philosophers they did not distinguish among them, regarding them all as in accord with reason, natural justice, and moral rectitude. <p> The framers of the state and federal constitutions conceded the desirability of prefatory statements delineating those rights. They agreed with Thomas McKean of Pennsylvania that such proclamations, though unnecessary, could

Herscu is again trying to have his parole period reduced in a bid to travel overseas to help his son in a civil litigation case. <p> The former millionaire, jailed for official corruption, claims the Corrective Services Commission has denied him natural justice and has taken irrelevant material into account when refusing his application for a parole reduction for the second time. <p> Supreme Court Justice Des Derrington yesterday ordered 's application for a judicial review of the Corrective Services

of the Department of Administrative Services, had already decided the plan for the old naval stores was to be rejected. <p> Yet it said that in a letter dated July 17, 1991, the Government gave JL Holdings "the facade that it was being afforded natural justice and a reasonable opportunity for due consideration to be given to any submission". The claim said the evidence for Mr Goss's position in May 1991 was a memo from Mr Rudd to then Acting Premier Tom Burns. <p> It said Mr Rudd's memo also indicated Mr

Australia's, entanglement in Vietnam was the worst idea they'd heard in their short lives, lives they were not prepared to put on the line in its

defence. Most of them believed that the Bjelke-Petersen government was oppressive, blind to natural justice, and mad around the edges. They also believed some of his cops, and his cops they were, were bent. And, at least within the ABC, they came to believe that change for the better might, just might, be achieved if the governments of the day were

today. Two board members, Anne English and Grahame Denovan, took legal action to stall the recommendation before it was formally endorsed. Barrister Marshall Cooke, QC, representing the pair, argued their removal from the board was "contrary to natural justice" and they were given no reason for their dismissal. But Justice J.W.B. Helman yesterday ruled against the application, saying that the Minister's decision could not be "challenged, appealed, quashed, set aside or called into question" under existing

today. Two board members, Anne English and Grahame Denovan, took legal action to stall the recommendation before it was formally endorsed. Barrister Marshall Cooke, QC, representing the pair, argued their removal from the board was "contrary to natural justice" and they were given no reason for their dismissal. "The Primary Industries Minister has given no reason (for dismissal) to the members of the board nor has he given them any opportunity to be heard," he said. Mr Cooke said no one had complained to

being inquired into. As Dunne told the committee: "To have the same officer then review the findings and recommendations of such an inquiry, when the findings might have been critical of his own prior role, defies both common sense and natural justice." And so it does. Witness after witness to the parliamentary committee made the same point in theoretical terms; Dunne offered a tragically practical example. Under the existing Defence Inquiry Regulations, the Minister of Defence has the power to

to Mr Barratt's termination. The judge also ordered that Mr Barratt be provided with a statement of the issues relating to the termination by Monday morning. "It would be helpful to know whether they are asserting we are not entitled to natural justice, and also whether there are other matters or other grounds that are available to the Commonwealth that we are not aware of," Mr Ellicott said. When Mr Ellicott raised the question of the issues and the Government's attitude, Mr Hughes quipped: "Stop

to be the answer for which Hughes was looking. It might also turn out to be the question on which the case turns. It is also possible that Barratt might win the action on the "natural justice" argument, only for the Government to give him "natural justice" and then sack him. But that would send a chilling message to other department secretaries. Barratt's slow, thoughtful replies to questions also give a hint of why his relationship with Moore was troubled. Moore, a successful businessman and

Diary </hl> <bl> Martin Waller </bl> <dt> 05 November 1999 </dt> SIGNS of Anglo-French detente at the highest level: John Major is one of the more unlikely saviours of Le Figaro, the debt-plagued French daily newspaper. A deal has just gone through for **Carlyle Group**, an American investment fund run by Frank Carlucci, Ronald Reagan's Defence Secretary, to take a 20 per cent stake. Major is on Carlyle's European advisory board, as it happens, charged with helping with such European deals. Le Figaro is the

</xr> <hl> Taking aim </hl> <dt> 07 November 1999 </dt> Photograph) --TAKING AIM ... Sir Colin Chandler, whose Vickers group has just been taken over by Rolls-Royce, may head a buyout of its tanks arm, maker of the Challenger 2, backed by America's **Carlyle Group**. Britain's Alvis is making a rival bid...Story, page 3 <xr> 9141 </xr> <hl> Break-up bid for National Power; Takeover </hl> <bl> Andrew Lorenz </bl> <dt> 07 November 1999 </dt> A CONSORTIUM designed to

launch a \$6.5 billion break-up bid for

favourite to buy Vickers Defence Systems, thereby consolidating the previously fragmented British armoured vehicle industry into a single hand. Alvis will be supported by GKN, the diversified industrial giant that holds 29.9% of its equity. But the **Carlyle Group**, the American private equity firm, has emerged as a likely rival bidder. Carlyle was founded by James Baker, American secretary of state during the Bush presidency, and numbers John Major and Lord Howe, the former foreign secretary, among its main rival. The deal with Giat is the outcome of a year-long search by Sir Colin Chandler, chief executive of Vickers, for a partner in the armoured vehicles industry. Vickers also considered a link-up with Rheinmetall, a German rival, and the US-based **Carlyle group**. European governments have been pressing for consolidation in the armoured vehicles industry because of declining orders and a serious problem of over capacity. While around 20 manufacturers make the vehicles, only a handful of governments are

demonstrated by John Major's entry which has quadrupled in the past year. He is now chairman of the European advisory board of the Emerson Electric Company, based in St Louis in the United States, and is a member of the European advisory board of the **Carlyle Group**, based in Washington DC. His business commitments meant that Mr Major paid nine visits to the US last year. He paid three visits to France and also visited South Africa and Singapore. Jack Cunningham, the Cabinet "enforcer", reinforces his

directorships also include being deputy chairman of British American Tobacco for Pounds 100,000 a year. <p> Then there's his old Cabinet colleague, former Premier John Major. Last week Mr Major was appointed European chairman of US investment firm **Carlyle Group**. <p> The Pounds 9 billion firm-which invests in start-up companies worldwide refused to disclose how much he was getting. But the top Tory is already a non-executive director of The Mayflower Group-the UK's leading manufacturer of buses. He
